# Tex converter

This document will explain usage of render man tex converter tool

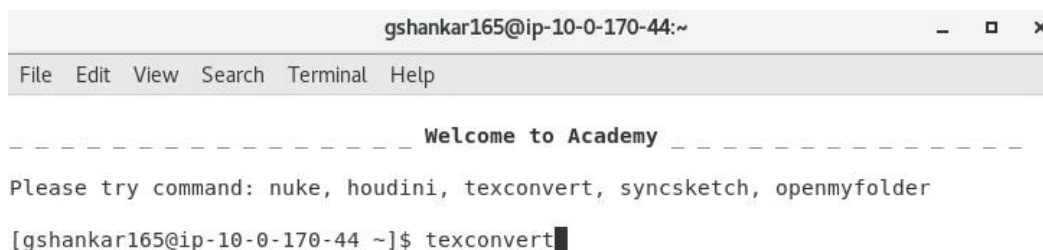

What is Tex converter?

Render man requires .tex files for rendering any image file. This tool generates .tex files of any image file. The tool is developed by TD Girijashankar Senapati, Academy cloud tech team.
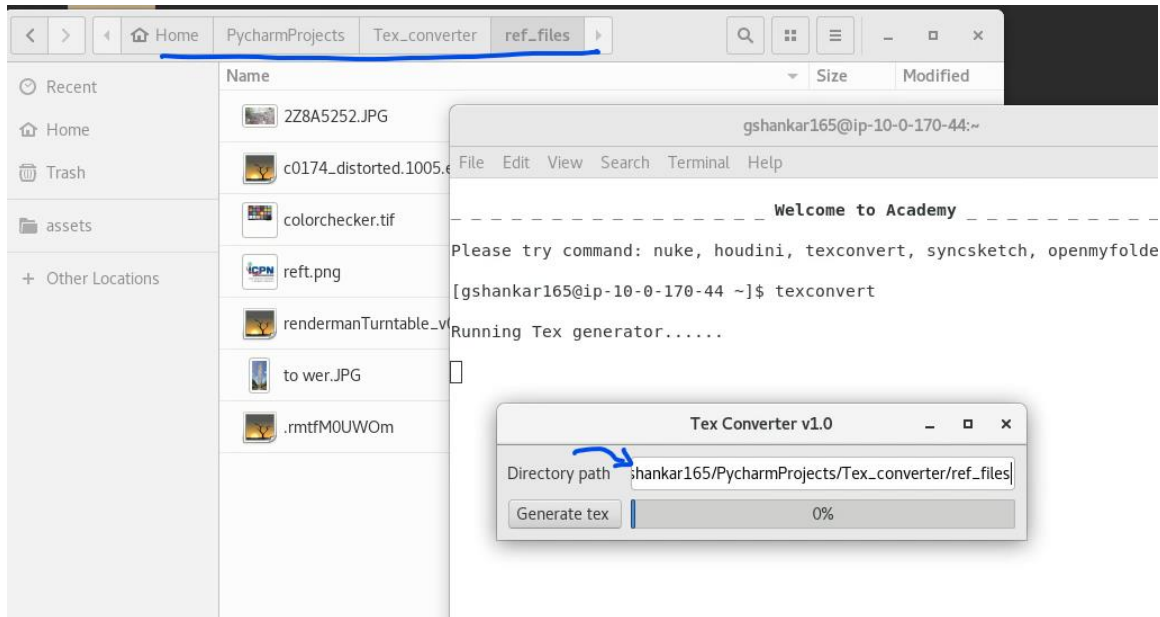

How to run?

This tool can be opened by terminal commands **texconvert**.

Enter the directory path, that has images/textures in it and click on Generate tex button

Also, it can convert single file into .tex file.
Just enter the image file and press button.

How to reach Technical Support?

For assistance on any technical issues (like whitelisting, workstation, software, renders), send an email to:
techsupport@thefocus.com
